**e-Bikes Introduction**

This “Class 1” E Bike complies with Federal Governments guidelines, with regard to total watts and top speed.

This product does not conform to Federal Motor Vehicles Standards and is not intended for operation on public streets, roads or highways. Serious injury can result from the unsafe operations of this vehicle. **Always obey State and Local Laws when using this product.**

This product is not designed to be jumped. If jumped, even from the curb, The E-bike Frame could break causing serious injury or death. If jumped, the warranty is void.

Riding an e-bike is similar to riding a regular bike but offers a motor that provides assisted power when pedalling.

**WARNINGS:**

- **When mounting your e-bike,** always apply full front and rear brake lever pressure to keep the unit from moving while mounting and do not put feet on the pedals until you are sitting on the seat.
- **Your e-bike travels at higher speeds** than most riders are used to when pedaling a traditional bike. It is very important that you are aware of your surroundings and obstacles around you and be extra careful when you first start moving. It’s important to watch the path surface you are on which can cause tires to slip or flatten.
- **An electric bike is heavier** and requires more time to stop due to weight and faster speeds. Practice starting, riding and stopping in a closed space with no other vehicles and always ride with hands near the brake levers.
- **Before riding,** familiarize yourself with the products operation.
- Do not become distracted by the Display. Change Display settings only when stopped.
- Never ride at speeds faster than you are comfortable with.
- Always start riding with the lowest assist speed.
- Avoid riding this product on wet, frozen, oily or unpaved surfaces or under the influence of drugs and/or alcohol. Avoid uneven surfaces, potholes, surface cracks and obstacles.
- Avoid riding in rain and wet weather and always store e-bike indoors.

**e-Bike Range:**

- Higher assist setting will shorten the distance your e-bike can travel.
- Always keep tires at proper inflation pressure (shown on side walls).
- Heavier riders will shorten riding range.
- Hills or rough terrain will shorten riding range.
- Starting and stopping effects riding range.
- Always fully charge your e-Bike before each ride.

**IMPORTANT! Read Additional Safety and Warnings >>**
WARNING - TO AVOID SERIOUS INJURY:

Failure of the rider to obey the following Safety Warnings can result in serious injury or death. Check local laws governing the use of electrical vehicles.

- ADULT RIDERS ONLY.
- DO NOT USE THE VEHICLE IN AN UNSAFE MANNER OR AT AN UNSAFE SPEED. Not intended for jumps - this can damage the product.
- CHOKING HAZARD: Small parts, adult assembly required.
- Before using this product, fully understand the controls and safety issues. Riders must demonstrate the capability and skill to handle the vehicle and operate its controls to avoid falls or collisions.
- Obey all traffic regulations, signs, and signals.
- Before each ride, check that the steering system is correctly adjusted and that all connection components are firmly secured and not broken.
- While using the product, keep hands and fingers away from wheels and other moving parts to avoid danger of pinching or entrapment.
- Riders should always wear a properly fitted helmet that complies with U.S. Consumer Product Safety Commission (CPSC) Standard 16 CFR 1203 or equivalent standard for your country.
- Always wear shoes. Gloves, knee and elbow pads recommended.
- Ride on the correct side of the road, in a single file, and in a straight line.
- There are additional hazards of using the vehicle in areas other than private grounds.
- If possible, avoid riding at night, dusk, dawn and any other time of poor visibility.

IF YOU MUST RIDE AT NIGHT OR AT TIME OF POOR VISIBILITY:
- Use a correctly installed headlight and taillight.
- Headlights are required by all states for nighttime riding and taillights are required in some states.
- Battery-powered lights or flashing safety lights are also recommended.

MAKE YOURSELF MORE VISIBLE TO MOTORISTS.
- Reflectors: For your own safety, do not ride the bicycle if the reflectors are incorrectly installed, damaged, or missing. Make sure the front and rear reflectors are vertical. Do not allow the visibility of the reflectors to be blocked by clothing or other articles. Clean the reflectors, as necessary, with soap and a damp cloth.
- Wear light-colored or reflective clothing, such as a reflective vest and reflective bands for your arms and legs.
- Use reflective tape on your helmet.

USE EXTRA CAUTION IN WET WEATHER:
- Ride slowly on damp surfaces because the tires will slide more easily.
- Allow increased braking distance in wet weather.

AVOID HAZARDS TO PREVENT LOSS OF CONTROL OR DAMAGE TO YOUR WHEELS:
- Be aware of drain grates, soft road edges, gravel or sand, pot holes or ruts, wet leaves, or uneven paving.
- Cross railroad tracks at a right angle to prevent the loss of control.
- Do not carry any passengers.
- Do not carry any items or attach anything to your bicycle that could hinder your vision,

Lithium-Ion Battery Storage and Disposal

Do not leave batteries unused for extended periods of time, either in the product or in storage. When a battery has been unused for 6 months, check the charge status and charge or dispose of the battery as appropriate.

STORAGE:
- Charge or discharge the battery to approximately 50% of capacity before storage.
- Charge the battery to approximately 50% of capacity at least once every six months.
- Remove the battery and store it separately from the product.
- Store the battery at temperatures between 5 °C and 20 °C (41 °F and 68 °F).
- Do not store battery in extreme hot or cold temperatures.
- Wipe the battery clean with a dry cloth prior to storage. Wash cloth separate from other clothes.

BATTERY DISPOSAL:
- Lithium-Ion batteries must be recycled or disposed of in an environmentally sound manner.
- Lithium-Ion batteries are subject to disposal and recycling regulations that vary by country and region. Always check and follow your applicable regulations before disposing of any battery.
- Do not dispose of battery in a fire. The battery may explode or leak acid.
- Do not dispose of the battery in household trash. The incineration, land filling or mixing of sealed Li-ion/lead-acid batteries with household trash is prohibited by law.
- Return an exhausted battery to a federal or state approved Li-ion/lead-acid battery recycler (check local battery disposal regulations).
FOLLOW THESE STEPS IF THE BATTERY NEEDS TO BE REPLACED OR REMOVED:

1. Turn OFF Power A.
2. Remove Power Plug B by turning collar in counter-clockwise direction.
3. Remove Seat by removing Bolt C and Seat Clamp.
4. Supporting Battery/Seat Post weight, open Seat Clamp D and remove Battery.

INSTALL NEW BATTERY/SEAT POST:

5. Install new Battery/Seat Post in opposite order shown above.
6. Install and adjust Seat as shown in the Seat Assembly section in this manual.

WARNING - TO AVOID SERIOUS INJURY:

hearing, or control.

- Do not ride with both hands off the handlebar.
- Do not tow or push the product.
- Do not modify the product.
- Replace worn or broken parts immediately with original equipment.
- If anything does not operate properly, discontinue use.

- DO NOT TAMPER WITH THE ELECTRICAL SYSTEM: Doing so may create a short, causing
  the fuse to trip or other damage including fire.

- Risk of Fire: Do not bypass fuse. Replace only with original size and type.
- The supply terminals are not to be short-circuited
- Non-rechargeable batteries are not to be recharged
- Batteries are to be inserted with the correct polarity
- Rechargeable batteries are only to be charged by adults.

- The battery chargers used with the toy are to be regularly examined for damage to the
cord, plug, enclosure and other parts, and in the event of such damage, they must not be
used until the damage has been repaired.

- Changes or modifications to this unit not expressly approved by the party responsible for
compliance could void the user’s authority to operate the equipment.

- Do not use the vehicle in unsafe conditions such as snow, rain, loose dirt, mud sand or
fine gravel. This may result in unexpected action such as tip over and skidding. Using the
vehicle in loose dirt, mud, sand, or fine gravel may damage the electronics and gear box
inside the vehicle.

- Do not overload the vehicle. Do not drive in very hot weather, components may overheat.
Do not allow water or other liquids to come in contact with the battery or other electric
components.

WARNING: ALWAYS WEAR YOUR HELMET
WHEN RIDING THIS PRODUCT!

- Helmet should sit level on your head and low on your forehead. Exposed forehead can result in serious injury.
- Adjust the strap sliders below the ear on both sides.
- Buckle the chin strap. Adjust strap until it is snug.
- No more than two fingers should fit between the strap and your chin.
- A proper fitting helmet should be comfortable and not rock for-
ward/backward or side to side.
Lithium-Ion Battery & charger Warnings:
The following safety hazards may result in serious injury or death to the user of the vehicle:

- Battery Charger for Indoor use only. Use of a battery or charger other than the supplied rechargeable battery and charger may cause a fire or explosion. Only use the supplied rechargeable battery (or lead-acid or lithium suitable replacement) and charger with the vehicle.
- Using the rechargeable battery and charger for any other product may result in overheating, fire or explosion. Never use the rechargeable battery and charger with another product.
- Explosive gases are created during charging. Charge the battery in a well ventilated area. Do not charge the battery near heat or flammable materials.
- Contact between the positive and negative terminals may result in fire or explosion. Avoid direct contact between the terminals. Picking up the battery by the wires or charger can cause damage to the battery and may result in a fire. Always pick up the battery by its case or handles.
- Battery must be handled by adults only. Liquids on the battery may cause fire or electric shock. Always keep all liquids away from the battery and keep the battery dry.
- Contact or exposure to battery leakage (lead acid) may cause serious injury. If contact or exposure occurs immediately call your physician. If the chemical is on the skin or in the eyes, flush with cool water for 15 minutes. If the chemical was swallowed, immediately give the person water or milk. Do not give water or milk if the patient is vomiting or has a decreased level of alertness. Do not induce vomiting.
- Battery Posts, terminals and related accessories contain lead and lead compounds (acid), chemicals known to cause cancer, reproductive harm and are toxic and corrosive. Never open the battery.
- Tampering or modifying the electric circuit system may cause a shock, fire or explosion and permanently damage the system. Exposed wiring and circuitry in the charger may cause electric shock. Always keep the charger housing closed.
- Non-rechargeable batteries are not to be recharged.
- Batteries are to be inserted with the correct polarity
- The supply terminals are not to be short-circuited.
- Batteries are only to be charged by adults.
- The battery chargers used with the toy are to be regularly examined for damage to the cord, plug, enclosure and other parts, and in the event of such damage, they must not be used until the damage has been repaired.
- All large lithium batteries are a potential fire risk and should be charged in a safe place, preferably outside or in the middle of a garage floor.
- Never charge a lithium battery unsupervised inside a house or building.
- Only an adult who has read and understands the safety warnings should handle, charge or recharge of the battery.

Inspection of the Bearings
Maintenance:
Frequently check the bearings of the bicycle. Have a bicycle service shop lubricate the bearings once a year or any time they do not pass the following tests:

Headset Bearings:
The fork should turn freely and smoothly at all times. With the front wheel off the ground, you should not be able to move the fork up, down, or side-to-side in the head tube.

Crank Bearings:
The crank should turn freely and smoothly at all times and the front sprockets should not be loose on the crank. You should not be able to move the pedal end of the crank from side-to-side.

Wheel Bearings:
Lift each end of the bicycle off the ground and slowly spin the raised wheel by hand. The bearings are correctly adjusted if:
- The wheel spins freely and easily.
- The weight of the spoke reflector, when you put it toward the front or rear of the bicycle, causes the wheel to spin back and forth several times.
- There is no side-to-side movement at the wheel rim when you push it to the side with light force.
Lubrication

**WARNING:**
- Do not over lubricate. If oil gets on the wheel rims or the brake shoes, it will reduce brake performance and a longer distance to stop the bicycle will be necessary. Injury to the rider or to others can occur.
- The chain can throw excess oil onto the wheel rim. Wipe excess oil off the chain.
- Keep all oil off the surfaces of the pedals where your feet rest.
- Using soap and hot water, wash all oil off the wheel rims, the brake shoes, the pedals, and the tires.
- Rinse with clean water and dry completely before you ride.
- Using a light machine oil (20W), lubricate the bicycle according to the following table:

<table>
<thead>
<tr>
<th>What</th>
<th>When</th>
<th>How</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pedals</td>
<td>every six months</td>
<td>Put four drops of oil where the axles go into the pedals.</td>
</tr>
<tr>
<td>Chain</td>
<td>every six months</td>
<td>Put one drop of oil on each roller of the chain. Wipe all excess oil off the chain.</td>
</tr>
<tr>
<td>Derailleurs</td>
<td>every six months</td>
<td>Put one drop of oil on each pivot point of the derailleurs.</td>
</tr>
<tr>
<td>Brake Levers</td>
<td>every six months</td>
<td>Put one drop of oil on the pivot point of each brake lever.</td>
</tr>
<tr>
<td>Wheel Brakes</td>
<td>every six months</td>
<td>Put one drop of oil on the pivot point of each cantilever brake.</td>
</tr>
<tr>
<td>Brake and cable</td>
<td>every six months</td>
<td>Put four drops of oil into both ends of each cable. Allow oil to soak back along the cable wire.</td>
</tr>
<tr>
<td>Rear Sprocket Cluster</td>
<td>every six months</td>
<td>Lay the bicycle on its left side. Slowly turn the rear wheel clockwise. Put four drops of oil in the crack between the rear sprockets (which are stationary) and the freewheel body (which is turning clockwise).</td>
</tr>
<tr>
<td>Shock Fork</td>
<td>every six months</td>
<td>Lift up the rubber fork boot and dab a small amount of grease on the fork leg just above the plastic bushing.</td>
</tr>
</tbody>
</table>

Owner's Bicycle Identification Record

**NOTE:** This information is only available on the bicycle itself. Each bicycle has a Recovery Code stamped into the frame. The Recovery Code (1) can be found on the bottom of the crank housing as shown.

Write this number below to keep it for future reference.
If the bicycle is stolen, give this number and a description of the bicycle to the police. This will help them find the bicycle.

Recovery Code:

Purchase Date:

Model Name:

Fitting the Rider to the Bicycle:

**DIAMOND FRAME BICYCLES WITH LEVEL TOP TUBE:**
Stand-over height is the basic element of bike fit. To check for correct stand-over height, straddle the bike while wearing the kind of shoes in which you’ll be riding, and bounce vigorously on your heels. If your crotch touches the frame, the bike is too big for you.

A bike which you ride only on paved surfaces, should give you a minimum stand-over height clearance (1) of 2 inches (5 cm). A bike that you’ll ride on unpaved surfaces should give you a minimum of 3 inches (7.5 cm) of stand-over height clearance. And a bike that you’ll use off road should give you 4 inches (10 cm) or more of clearance.

**STEP-THROUGH FRAME BICYCLES:**
Stand-over height does not apply to bicycles with step-through or deeply sloped frames. Instead, the limiting dimension is determined by saddle height range:
- Adjust seat height as shown in this manual until your leg is slightly bent with the pedal in the full downward position - without exceeding the limits set by the height of the top of the seat tube and the "Minimum Insertion" or "Maximum Extension" mark on the seat post.
**Tires (as equipped)**

**MAINTENANCE:**
- Frequently check the tire inflation pressure because all tires lose air slowly over time. For extended storage, keep weight off of the tires.
- Do not use unregulated air hoses to inflate the tire/tubes. An unregulated hose can suddenly over inflate tires and cause them to burst.
- Replace worn tires.

**WARNING:** Do not ride or sit on the unit if a tire is under inflated. This can damage the tire, inner tube and rim.

**INFLATING THE TIRES:**
- Use a hand or a foot pump to inflate the tires.
- Service station meter-regulated air hoses are also acceptable.
- The maximum inflation pressure is shown on the tire sidewall.

Before adding air to any tire, make sure the edge of the tire (the bead) is the same distance from the rim, all around the rim, on both sides of the tire A. If the tire does not appear to be seated correctly, release air from the inner tube until you can push the bead of the tire into the rim where necessary. Add air slowly and stop frequently to check the tire seating and the pressure, until you reach the correct inflation pressure.
e-Bikes Maintenance:

GENERAL: The vehicle should be checked for damage, missing or badly worn parts before each use. If any part of the product does not operate properly – discontinue use.

• Check the tightness of the fasteners before each use. Replace any fasteners that are damaged.
• Inspect the product frequently. Failure to inspect the product and to make repairs or adjustments, as necessary, can result in injury to the rider or to others. Make sure all parts are correctly assembled and adjusted as written in this manual and any “Special Instructions”.
• Immediately replace any damaged, missing, or badly worn parts.
• Make sure all fasteners are correctly tightened as written in this manual and any “Special Instructions”. Parts that are not tight enough can be lost or operate poorly. Over tightened parts can be damaged. Make sure any replacement fasteners are the correct size and type.
• Check the tightness of the wheels.
• Keep the product clean and free of dirt, dust and water. This will prolong the useful life of the product.
• Always remove the battery when replacing a component or performing maintenance.
• Periodically check your e-Bike's wiring and motor condition and mounting.
• Always store your e-Bike indoors. Bike's left outside in weather can deteriorate very quickly. Store your e-Bike in a clean dry environment. Do not cover with plastic which will hold moisture inside and affect your bike's electrical system.
• Store your battery indoors during cold weather to optimize battery performance.

CAUTION: Self-locking nuts and other self-locking devices may lose their effectiveness when re-used.

CLEANING: Do not submerge the drive unit in water or wash with a pressurized hose. Keep all components clean, especially the battery pack contact points. Clean carefully with soft, damp cloth using only mild soap and water.

STORAGE: Always store the battery pack in a cool dry place. Keep it away from sources of heat, such as stoves and heaters. During periods of prolonged storage, battery pack should be charged at leased once every 6 months at a minimum of 60% or every 3 months at 40%. Do not charge higher than 60% when storing.

NOTE: If the instructions in this manual or any “Special Instructions” are not sufficient for you, please contact customer service.
Introduction to Assembly

This Owner's Manual may be made for several different style products.
- Some illustrations may vary slightly from the actual product.
- Follow instructions completely.
- If the product has any parts that are not described in this manual, look for separate "Special Instructions" that are supplied with the unit.
- All features, components and accessories are not included on all models.
- Use the Index page to locate specific sections of this manual.
- Please read through this entire manual before beginning assembly or maintenance.
- If you are not confident with assembling this unit, contact customer service.

⚠️ WARNING: Keep small parts away from children during assembly.

NOTE: All of the directions (right, left, front, rear, etc.) in this manual are as seen by the rider while seated.

Do not dispose of the carton and packaging until you complete the assembly of the product. This can prevent accidentally discarding parts of the unit.

Radio Frequency Information (charger/adapter/controller)

⚠️ WARNING: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. this device may not cause harmful interference, and
2. this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Rear Derailleur Adjustments - continued

Put the "low" adjusting Screw in the correct position as follows (fig E):
- Shift the chain onto the largest rear Sprocket (F).
- Loosen Nut of the cable clamp.
- Turn the "low" adjusting Screw (H) so the Jockey Roller is exactly below the largest rear sprocket.
- Tighten the Nut of the cable clamp.

Adjust the Index Shift System:
- Shift the chain onto the smallest rear sprocket.
- Without turning the crank, turn the Right Shift Control (A) one "click" rearward.
- Slowly turn the crank forward.
- The chain should move from the smallest rear sprocket to the next larger rear sprocket.
- Turn the Adjusting Barrel (B) OUT as needed so the chain moves exactly on to the second rear sprocket and does not rub, jump, or delay.

When adjusted properly, the shift system will operate smoothly with no chain rubbing.

Note: If you have trouble, take the bike to a bike shop.
Rear Derailleur Adjustments
The rear derailleur has two adjusting screws. The “low” adjusting screw, sometimes marked \( L \), limits how far the rear derailleur and chain can move toward the wheel. The “high” adjusting screw, sometimes marked \( H \), limits how far the rear derailleur and chain can move away from the wheel.

Put the “high” adjusting screw in the correct position as follows (fig D):
- Shift the chain onto the smallest rear sprocket. Loosen Nut \( C \) of the cable clamp.
- Turn the lever Barrel Adjuster \( A \) and rear Derailleur Adjustor \( B \) all the way IN (fig C).
- Turn the “high” adjusting Screw \( G \) so the Jockey Roller \( D \) is in line with the outside edge of the smallest rear Sprocket \( E \).
- Remove the slack from the cable wire and tighten the Nut of the cable clamp.

Installing the Front Wheel (as equipped)

Loosen the Front Brakes:
1. Squeeze the two Brake arms together \( A \).
2. Lift out the Brake Cable Guide \( B \) from the Guide Bracket \( C \).

Install the Front Wheel:
3. Set the Front Wheel into the front fork with Brakes pointing forward.
4. Install wheel retainers \( D \) making sure the tabs are in the Fork Retainer Holes \( E \).
5. Attach the front wheel with the Axle Nuts \( F \).

NOTE: For Quick Release Axle, see next section.

⚠️ WARNING: Do not use Nuts \( F \) without serrations to attach the front wheel.

NOTE: Ensure wheel spins freely without contacting fork or fender.

⚠️ WARNING: Failure to obey these steps can allow the front wheel to loosen while riding. This can cause injury to the rider or to others.

RE-ATTACH FRONT BRAKE CABLE:
1. Squeeze the two Brake arms together \( A \).
2. Insert the Brake Cable Guide \( B \) into the cutout in the Guide Bracket \( C \).
3. Make sure the Brake Cable Guide \( B \) is seated securely in the Guide Bracket \( C \) cutout.

⚠️ WARNING: Check Front Brake Adjustment Before Riding! See Brakes Section
Handlebar and Stem Installation - Threadless Stem (as equipped):

CAUTION:
- Threadless Stem should be installed with bike sitting on the ground and both wheels installed.
- Make sure Fork is fully inserted from the bottom and Front Brake is pointing FORWARDS.
- Disc Brake models: Disc Brake will generally be on the LEFT side of the Fork.

STEP 1:
1. Add Spacers as needed for proper Gap.
2. Insert the Stem fully onto the Fork Tube.
3. Point the Stem towards the front of the bike and in line with the fork and wheel.
4. With downward pressure on Stem, move bicycle fork/wheel back and forth so there is no looseness in Headset Bearings.

NOTE: Ensure there is BETWEEN 1mm and 6mm gap between Fork Tube and top of Stem.

5. Place Cap into stem and tighten screw securely. Try to move Fork back and forth. There should be no movement in Headset Bearings. If needed, redo above steps.
6. If supplied, insert Rubber Cap securely.

STEP 2:
7. Tighten the stem bolts securely.

WARNING: Ensure handlebar and fork turn left to right smoothly and without friction.

Shift System - continued

CAUTION: Do not force the shift lever. Shift only when pedaling forward and without strong force. Do not backpedal. Backpedaling can cause the chain to come off the sprockets. Backpedaling and shifting while not pedaling can damage the sprockets and stretch the cable wire.

There is no “correct gear” in which to ride the bicycle. The “correct gear” is the one that is comfortable to you.

To select a gear while riding (this model has only one Front Sprocket (fig B)).

1. While pedaling, shift the chain onto different rear sprocket.
2. You will feel a difference in the rhythm and ease of pedaling.
3. Shift the chain to the gear that allows you to pedal at a rhythm and effort that is comfortable to you.
4. When riding uphill or against the wind, you may wish to shift the chain onto a larger rear sprocket.
Shift System

Parts of the Shift System:

• Right-hand Shift Lever A operates the Rear Derailleur B.
• Rear Sprocket Set C.

Operation:

Operate the shift system as follows:

1. The rider turns the rear shift control around the handlebar (for twist shift models) or moves the shift lever (thumb shift models) to an index position.
2. When the rear shift control moves into each position with a “click” sound, the shift is complete.
3. The shift control pulls a cable wire that is attached to the rear derailleur.
4. The derailleur moves and guides the chain from one sprocket to another.
5. If there is some chain noise after the shift, turn the rear shift control a small amount to “trim” the rear derailleur.

continued >>

Handlebar Installation

2/4 BOLT STEM:

1. If necessary, loosen the Handlebar Clamp Bolt(s) A and rotate Handlebar B into a comfortable riding position.
2. Tighten Handlebar Clamp Bolt(s) A securely.

NOTE: On four bolt stems, tighten Bolts A evenly in a cross-pattern as shown. Do not over tighten.

WARNING: If the handlebar clamp is not tight enough, the handlebar can slip in the stem. This can cause damage to the handlebar or stem, and can cause loss of control.

NOTE: (various models)
1. Position FRONT Reflector C so it points straight forward.
2. Tighten Clamp Screw.

Testing Stem and Handlebar Tightness

TO TEST THE TIGHTNESS OF THE STEM:

• Straddle the front wheel between your legs.
• Try to turn the front wheel by turning the handlebar.
• If the handlebar and stem turn without turning the front wheel, realign the stem with the wheel and tighten the stem bolt(s) tighter than before (about 1/2 revolution only at a time) until the handlebar and stem do not turn without turning the front wheel.

TO TEST THE TIGHTNESS OF THE HANDLEBAR CLAMP:

• Hold the bicycle stationary and try to move the ends of the handlebar up and down.

CAUTION: Do not exceed 100 lbs (45 kg) downward force.
**Assembly**

**STEPS:**

**NOTE:** Battery/Seat Post may be pre-installed.

- With Seat facing FORWARD, insert to desired riding height.

**WARNING:** To prevent the Seat coming loose and possible loss of control, the “MIN-IN” (minimum insertion) mark A on the Seat Post must be BELOW the top of the Seat Tube B.

**STEP 1 - INSERT SEAT POST INTO SEAT TUBE:**

- If needed, open the Quick Release Lever C.
- Point the Seat forward and put the Seat Post into the Seat Tube B with the “MIN-IN” marks BELOW the top of the Seat Tube as shown.
- **NOTE:** Seat Stop D.

**STEP 2 - QUICK RELEASE LEVER:**

**CAUTION:** Operate the Quick Release Lever by HAND ONLY - DO NOT USE TOOLS.

1. As needed, open and close the Quick Release Lever C with one hand and tighten or loosen the Adjusting Nut E by hand, so that you first feel resistance to the Quick Release Lever when it is in the “OPEN” position.
2. Push the Quick Release Lever to the “CLOSE” position - It will take strong force to clamp securely so that the Quick Release Lever lays against the Seat Post Clamp.

**WARNING:** You must use strong force to move the Quick Release Lever securely to the “CLOSE” position. This ensures that the seat does not move during normal operation.

**STEP 3 - CONNECT BATTERY POWER PLUG:**

- Align Connector F with Socket G as shown.
- Insert fully and tighten Collar fully clockwise - do not over-tighten.

---

**Operation**

**TURNING ON ASSIST:**

1. Press Battery ON button A under Seat.
2. Press and hold Display Button B until unit light up.
3. Display Bar C shows Battery Charge level.
4. Buttons D toggle Assist Mode from Low, to Mid, to High E.

**USING ASSIST MODE:**

- With desired Mode selected, begin pedaling in an open area. After one or two pedal revolutions, assist will engage. You will notice the bike move forward quickly.

**CAUTION:** Make sure you have both hands on the handlebars and are in full control of the bike.

- To change modes while riding, select buttons D to change assistance level up or down E.

**TURNING SYSTEM OFF:**

1. Press and hold Display Button B until Display shuts OFF.
2. Press Battery button A under Seat to turn battery OFF.

**NOTE:** Battery Charging Port under Seat F.
Charging the Drive Battery:

**WARNINGs:**

- All large Li-Ion batteries are a potential fire risk and should be charged in a safe place, preferably outside or in the middle of a garage floor.
- Never charge a lithium battery unsupervised inside a house or building.
- Only an adult who has read and understands the safety warnings should handle, charge or recharge the battery.
- See other Battery Warnings in this manual.
- Check the drive battery and charger (supply cord, connector) for wear and damage before charging. Do not charge the battery if damage has occurred. Only replace with the same type and voltage rechargeable battery and charger supplied by the manufacturer.
- Only use the rechargeable battery (or equivalent replacement) and charger supplied with your vehicle.
- The drive battery should be charged when depleted, or if not used regularly, once a month. Failure to charge the battery as directed will cause permanent damage to the battery and will void the warranty.
- Charge only when battery has cooled to room temperature after a ride.

**STEPS:**

1. Turn power switch OFF A.
2. Open Charging Port B.
3. Plug Charger plug into unit Charging Port.
4. Plug Charger into Wall outlet.
5. When battery is fully charged, unplug charger from the wall outlet and disconnect from charger port.

**NOTES:**

- The charger may feel warm during the charging. If excessively hot, unplug and replace.
- This product has charging protection: When charging, all functions are turned OFF.

**Seat Bolt Saddle Adjustment (various models)**

**SINGLE BOLT CLAMP:**

1. Loosen the Clamp Bolt A sufficiently to allow any Serrations B on the mechanism to disengage before changing the saddle’s angle.
2. With serrations fully re-engaged and saddle in a comfortable riding position, tighten the Clamp Bolt A securely to ensure the saddle will not come loose.

**WARNING:** Serrations on the mating surfaces of the Clamp can wear with use and adjustment. Check that the Clamp is tight and secure before each ride.

**DUAL CLAMP:**

3. Loosen Clamp Bolt/Nut C as needed and adjust Seat to a comfortable riding position.
4. With Clamp fully on Seat Post as shown, tighten Bolt/Nut C securely so that seat does not move when in use.

**Testing Seat Clamp and Post Clamp Tightness**

To test the tightness of the seat clamp and the post clamp:

- Try to turn the seat side-to-side and to move the front of the seat up and down.

- **If the seat moves in the Seat Clamp:**
  - Loosen the Seat Clamp Nut.
  - Put the seat in the correct position and tighten the Seat Clamp tighter than before.
  - Do this test again, until the seat does not move in the Seat Clamp.

- **If the Seat Post moves in the Seat Tube Clamp:**
  - Loosen the Seat Clamp Lever.
  - Put the Seat Post in the correct position and tighten the Seat Clamp Nut tighter than before.
  - If necessary, tighten or loosen Hand Nut so that Quick Release tightens securely.
  - Do this test again, until the Seat Post does not move in the Seat Tube Clamp.
Pedal Installation

⚠️ CAUTION: There is a RIGHT pedal marked R and a LEFT pedal marked L.

NOTE: A Pedal Wrench is preferred for attaching Pedals. A thin open-end wrench can also be used.

- The pedal marked R has right-hand threads. Tighten it in a clockwise direction.
- The pedal marked L has left-hand threads. Tighten it in a counterclockwise direction (anti-clockwise).
- Turn the right pedal marked R into the right side of the crank arm, and the left pedal marked L into the left side of the crank arm.

Tighten the pedals:
- Make sure the threads of each pedal are fully into the crank arm.

⚠️ WARNING: Ensure pedals are secure in crank arms so they will not loosen. Periodically check tightness.

Three-Piece Cranks (various models)

Maintenance: Both Crank Arms A were tightened to the spindle B at the factory. After riding the bicycle the first few times, make sure the crank arms have not loosened. If either crank arm has loosened during this “break-in” period, re-tighten or have it tightened by a bicycle service shop.

Frequently check the tightness of the crank arms. If loose, tighten or have them tightened by a bicycle service shop.

⚠️ WARNING: If you ride the bicycle with a loose crank arm, the crank arm may fall off. The spindle may also damage the crank arm.
